“Take as many steps backwards to not make a wrong step forward.”

Profile

I am a Master's student in Computer Science at the University of Antwerp, specializing in Software Engineering. My journey began with Arduino and Raspberry Pi projects, through which I discovered my passion for IoT and the integration of software and hardware systems. Over time, I broadened my expertise to include DevOps, Web Development, and Machine Learning.

My interest in logical systems was sparked early on by experimenting with Redstone in Minecraft, which led to a continuous pursuit of knowledge in the field. I am driven by learning and applying advanced technologies, both within teams and independently, with a strong focus on innovation and problem-solving.

Education

University of Antwerp

Antwerp, Belgium

MASTER OF SOFTWARE ENGINEERING

2024 - Present

- Specialization in Software Engineering. Courses focused on developing well-defined and structured software.
- Modeling software, testing software, designing software, etc.
- We learn new practices and methodologies to ensure that the software is of the best possible quality.

Minor: Management and Entrepreneurship.

University of Antwerp

Antwerp, Belgium

BACHELOR OF COMPUTER SCIENCE

2021 - 2024

- Learning the basics of computer science. The focus is on learning foundational concepts for building well-defined software.

Some skills I acquired: Web development, DevOps, Machine Learning, Databases, Algorithms and Data Structures, Project Management.

Kosch Schepperstraat

Herentals, Belgium

ELECTRICITY AND ELECTRONICS

2017 - 2021

- Learning the basics of electricity and electronics. Hands-on work with circuits, components, and electrical systems.
- Practical experience with electrical installations, microcontrollers, and technical drawing.

Work Experience

Dematic, Kion Group

Antwerp, Belgium

SOFTWARE DEVELOPER

Jul. 2024 - Aug. 2024

- I helped clean up the git repository. I also moved branches from one repository to another.
- Created small tools to help manage the git repository, preventing old branches from being forgotten. This was done using Docker and Python.
- Also assisted with some minor development tasks, such as creating a tool to patch configurations.

Geninc

Antwerp, Belgium

SALES AND RECRUITER

Jul. 2023 - Sep. 2023

- Door-to-door sales.
- I was responsible for selling Hello Fresh subscriptions.
- I was also responsible for recruiting new salespeople.

University of Antwerp

Antwerp, Belgium

TEACHING ASSISTANT

Jul. 2025

- Assisted in teaching a course on Software Testing.
- Helped students with their assignments and projects.
- Provided feedback on students' work and grading these.

Skills

General	Version control, Automation, Databases, Git, Communication, Machine Learning, IoT
DevOps	Docker, CI/CD
Back-end	RESTful API, SOAP, Data Structures, FastAPI, PyTorch
Front-end	React, HTML5, Astro, ShadCN
Programming	Python, C++, LaTeX, Arduino, TS/JS, Node.js, JAVA, Rust (basics)
Office	Office 365, Google Docs, Typst
Electronics	Fusion360, Eagle, TinkerCAD
Languages	Dutch (native), English (fluent), Chinese (basic), French (basic)

Projects

Digital twin of a city

FULL-STACK DEVELOPER

- I took on the role of full-stack developer in a team of 20, divided into 5 subteams. I helped lead the teams and ensured that the project stayed on track. I also helped lead my own team and ensured our individual goals were met.
- Backend development with Python and FastAPI. Developing the interaction between external APIs and the internal software.
- Frontend development with React. I helped develop some frontend components and ensured the frontend was user-friendly.
- I also helped with testing the software and ensuring it was error-free.

ASL Recognition Software

AI ENGINEER

- I took on the role of AI engineer in a team of 3. I was responsible for developing the AI model and also served as project lead.
 - I assisted my colleagues during the training steps and ensured the model was trained correctly.
- This project was a 6-month research project for a small subset of American Sign Language.

C Compiler

COMPILER DEVELOPER

- I took on the role of compiler developer in a team of 2. I was responsible for part of the compiler development.
- We built this compiler using Python and ANTLR, and developed it for a subset of the C language.
- The compiler converts C code into LLVM and MIPS assembly code.

Holiday Jobs

A.S. Adventure

STORE ASSISTANT

- I mainly worked in the travel department, where I was responsible for selling travel items.
 - I informed customers about the products and helped them with their choices.
- I was also responsible for keeping the department clean and organized, and ensuring products were in stock.

Local Farmer

STRAWBERRY SALES

- Selling strawberries.
- Informing customers about the strawberries and keeping the stand clean.

De Wijngaard

KITCHEN ASSISTANT

- Taking orders from customers and serving them.
- I was also responsible for helping in the kitchen and maintaining cleanliness.
